## Setting up Power on Timer for Pro V4

This feature is configured within the BIOS setting of the player. Ensure a USB keyboard is connected.
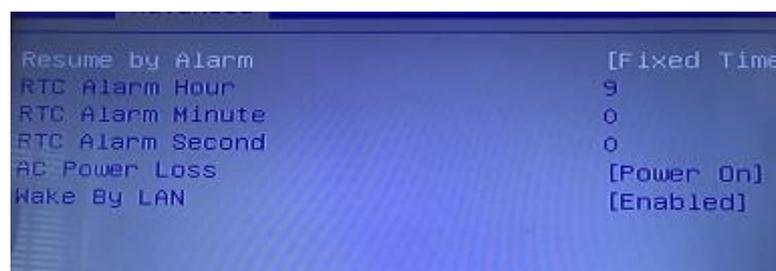

1. To access this, power on/reboot the player and after the audible "beep" keep pressing the "**Delete**" key. If successful you will see the below screen.

2. Using the arrow keys move over to the "**Advanced**" Tab and scroll down to "**Power Management Configuration**". Press Enter.
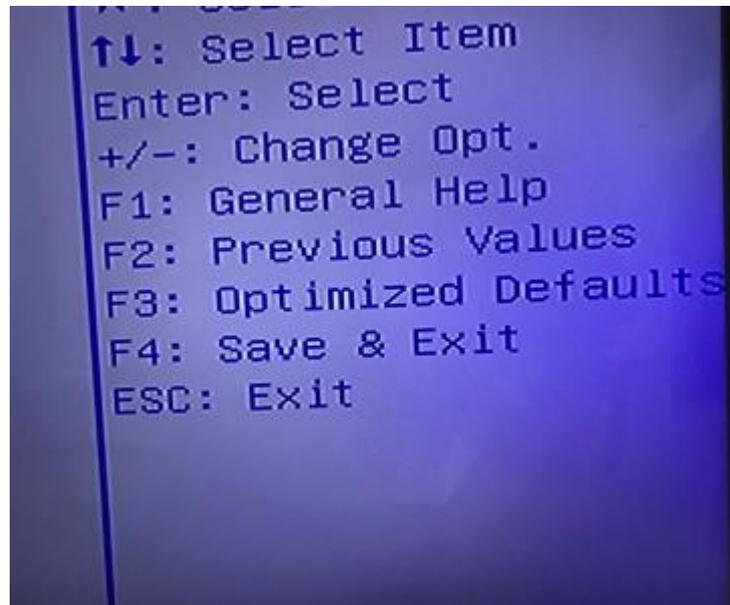

3. Change the "**Resume by Alarm**" setting to "**Fixed Time**" by again using the arrow keys as instructed on the right-hand part of the screen. Enter the time of day you want the player to power on, using numbers. The image below shows a power on time of 9am.

4. Ensure the "**AC Power Loss"** is set to "**Power on**" and Wake By LAN is Enabled. This LAN setting allows an IT dept to power the screen on over a compatible network using the player's MAC address.

5. Press **F4 to Save and Exit**

6. Press **Enter** when prompted to Save Configuration – highlighted on Yes.
